

# SAM Lite

Provide customers a snapshot overview of their license position while providing a baseline license report to help optimise renewals, repurpose licenses and support audit information.

To avoid paying too much or too little and risking vendor penalties, we provide an end-to-end SAM (Software Asset Management) programme. We draw on our granular understanding of vendor licensing, software version control, and product build requirements. As businesses use more software, on more devices, in the cloud and on-premise, SAM has become essential. SAM Lite will give your organisation a point in time, 30 day engagement that provides the visibility

and guidance needed to control costs and mitigate risks. SAM Lite delivers a license snapshot overview using a low impact implementation of Snow. We import your Microsoft License Statement(MLS) into the Snow License Manager (SLM) tool for reconciliation of your 30 day inventory. The output will provide a baseline license report supporting license renewal, audit information and cost savings.

## SAM Lite Core Features

	An inventory is collected by our Snow Agents over a 30 day period.		Zero footprint agent is deployed with no required customer access to SLM
	Remote Professional Services to aid deployment of zero footprint agent and monitor coverage.		Customers MLS is imported into SLM for reconciliation to the inventory.
	Conference call with Micromail to share baseline license information.		An insight report and detailed Excel report providing baseline license/device information

## The Power of Three

 Powered by SNOW Gartner's Magic Quadrant for SAM Tools	 License report supporting license renewal, audit information and savings	 Insights, advisory & program integration by Micromail
